Summary Information

The Great Basin Coordination Center (GBCC) is the focal point for coordinating the mobilization of resources for wildland fire, and other incidents throughout the Great Basin Geographic Area. The Great Basin Geographic Area encompasses Utah, Nevada, Idaho (South of the Salmon River), the Western Wyoming Mountains, and the Arizona Strip. GBCC is located in Salt Lake City, UT and provides Intelligence, and Predictive Services related products, for use by the wildland fire community for incident management decision-making.

GBCC Annual Fire Report General Information

GBCC is responsible for compiling fire reports for all *large* wildland fires on lands administered by the following five federal agencies; BLM, BIA, USFS, FWS, NPS, and state agencies. A *large* fire is defined as greater than 100 acres in forest fuel types, and greater than 300 acres in shrub and grass fuel types. Annual figures of total fire starts (regardless of size), and acres burned for individual units are also included.

Statistics used in this report were gathered from the Fire and Aviation Management Web applications (FAMWEB) System (which includes the Situation Report and Incident Status Summary {ICS-209} Programs, and from the Interagency Resource Ordering Capability (IROC). The statistics presented here, are intended to provide a geographic area perspective of annual fire activity and may not reflect official figures for a specific agency.

This document, in addition to previous years, is available electronically at the GBCC web page: <https://gacc.nifc.gov/gbcc/index.php> under the Intelligence link.

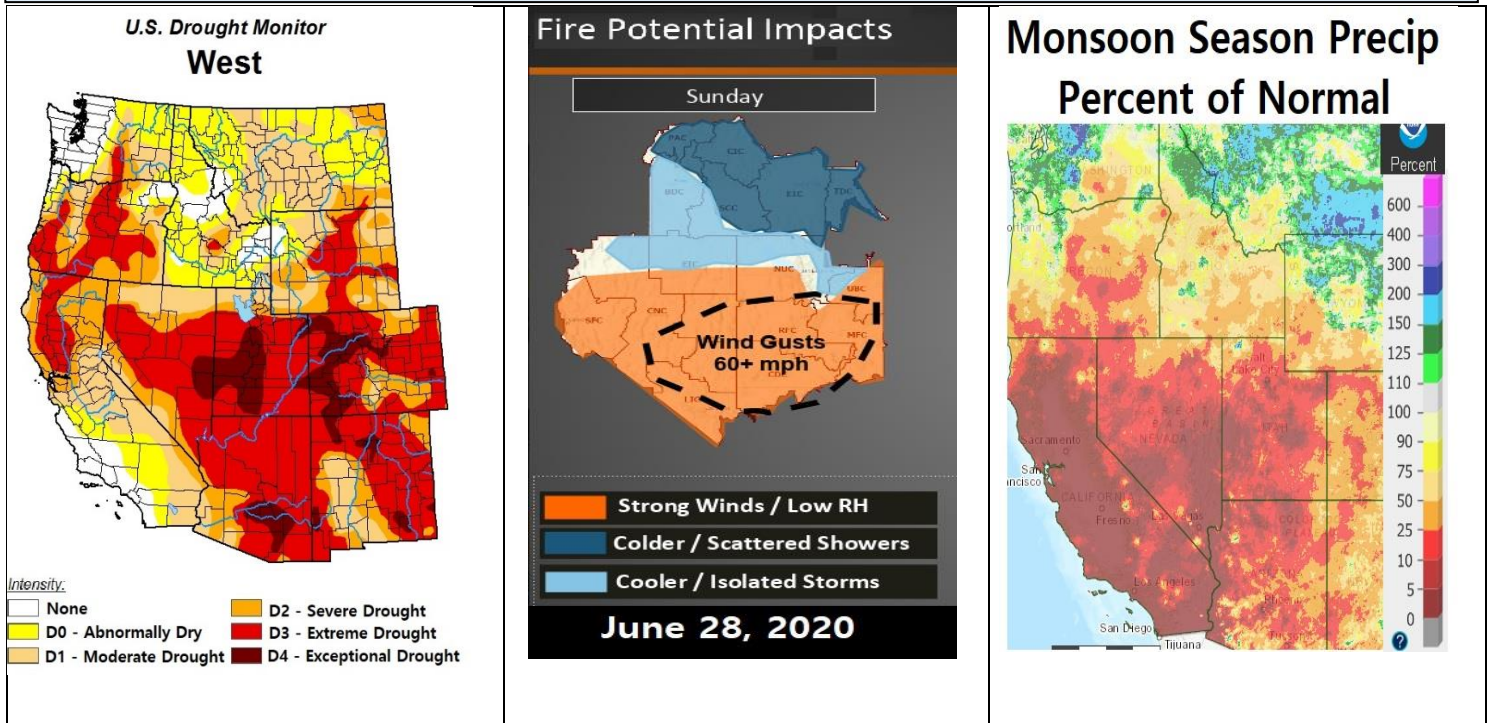

Disclaimer: The figures in this report provide general reporting information and overall accuracy cannot be guaranteed. Any determinations, policy, or subsequent reports using this information should be done under consultation with appropriate experts. For agency-specific details or official agency figures, contact the respective agency.

Trap fire, ID-STF, September 18, 2020

2020 Great Basin Fire Weather / Fuels Summary

Weather 2020: Drought/Strong Winds/Summer "Non-soon"

Notable Weather Events

- The 2020 Fire Season was preceded by a dry late Spring and early onset of Summertime heat and dryness across the southern half of the Great Basin.
- Above normal carryover fuel-load from the previous wet winter of 2018-2019 existed across lower elevations, especially south of the Idaho border.
- Fire season began 2 weeks sooner than 2019, approximately June 25th, across southern Utah/Nevada and the Arizona Strip.
- The Southwest Monsoon was mostly absent again during July-August, for the 2nd season in a row, and the 3rd time in 4 years, a disturbing climatic trend. Several wind and dry lightning events continued fire activity during the mid-summer periods when the Monsoon typically reduces fire activity in the south.
- Several unusually strong wind events caused extreme fire behavior. On June 28th an unusually strong cold front produced near hurricane force wind gusts up to 90 mph across much of Utah and Nevada.
- The mountains of Central Idaho and Wyoming had relatively cool and moist conditions through mid-summer, but gradually dried out to critical levels by August, with several large fires emerging.
- By late August into September, with fire activity increasing over northern mountains of Idaho and Wyoming, fuels were also at record dry levels across southern areas of the Great Basin, due to the lack of a Monsoon, expanding fire activity simultaneously across all areas of the Great Basin.
- The combination of simultaneous large fire outbreaks across California, the Pacific Northwest and the Great Basin, produced long periods of smoke-filled skies and poor air quality across the entire region.

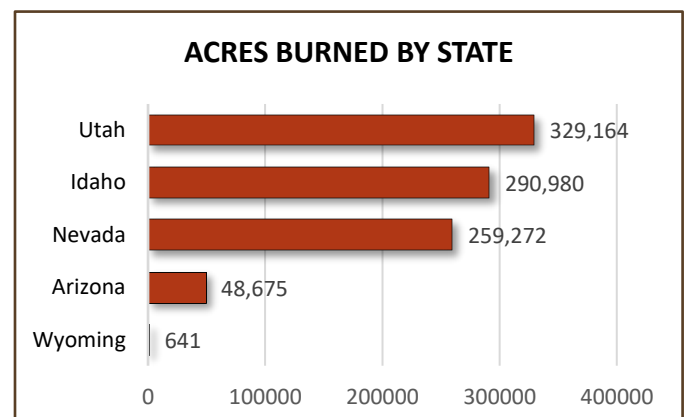

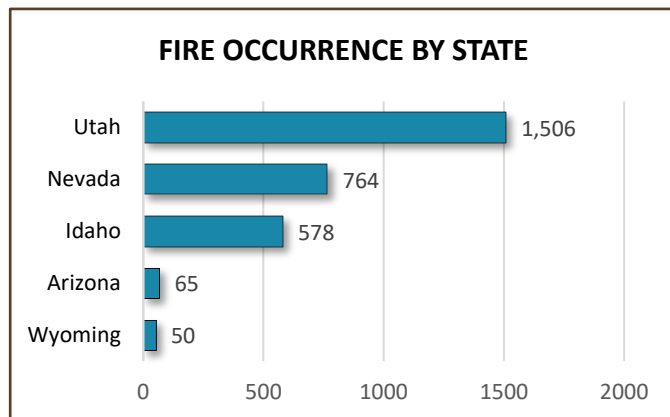

- The dry Spring and Summer, with lack of monsoon, produced “Extreme” to locally “Exceptional” drought conditions across the southern half of the Great Basin.
- By late September, cool and moist conditions began to lessen fire activity in the mountains of Idaho and Wyoming. However, the southern half of the Great Basin remained unusually dry, with large fire activity continuing well into late October.
- In mid-November, winds of 50 mph and dry humidity helped push 2 new large fires along Sierra Front.

Fire Summary for the Great Basin

The Great Basin had an above average year for fire occurrence and below average for total acres burned during 2020. There were 2,966 fires reported, burning a combined total acres of 950,117.

*3 fires for 21,385 acres in CA-OVD not included in table.

Great Basin Comparison with Historical Averages

The Great Basin experienced 122% of the 5-year average and 99% of the 20-year average, for ignitions. 2020 fell slightly below the average of acres burned, burning 78% of the 5-year and 80% of the 20-year averages.

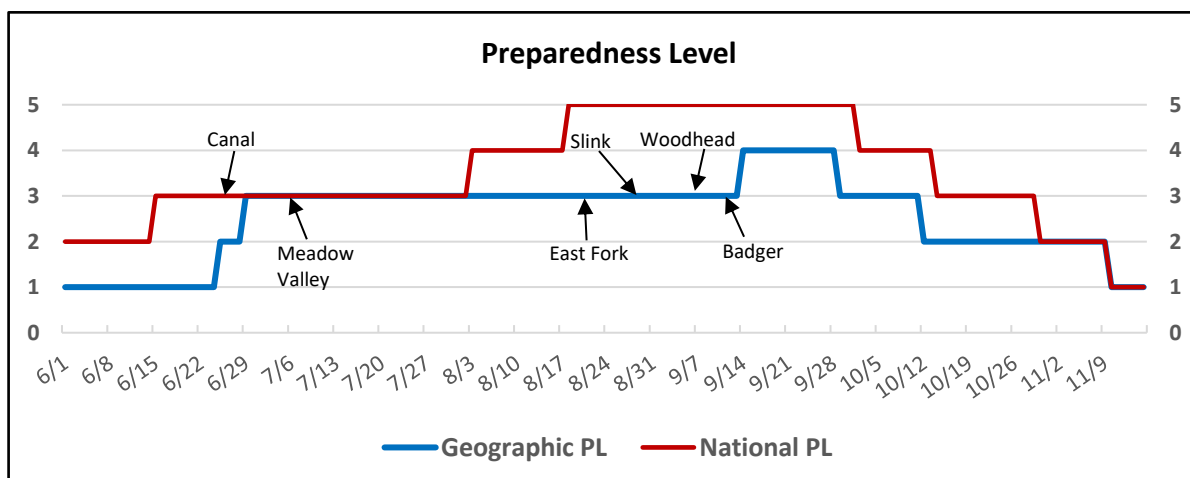

Preparedness Level Review

Great Basin's Preparedness Level was elevated from 1 to 2 on June 25th, two weeks earlier than the 2019 season; this timeframe is slightly later than the historical increase from PL 1 to PL 2.

On June 29th, the Great Basin's Preparedness Level increased to PL 3, approximately five weeks earlier than 2019. The increase was in conjunction with a spike in initial attack and resource commitment. The geographic area remained at PL 3 for seventy-seven days (until September 14th) when preparedness level bumped up to PL 4. The Great Basin remained at PL 4 for approximately fifteen days where we dropped to PL 3 on September 29th. Almost two weeks the Great Basin remained at PL 3 before returning to PL 2 where it held steady for a few weeks, before returning to PL 1, on November 9th.

National Preparedness level markers are included on the display below to illustrate how the national situation was fairly consistent with the conditions experienced within the Great Basin.

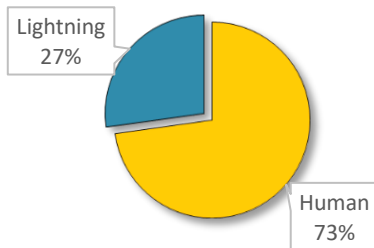

Year End Totals by Cause

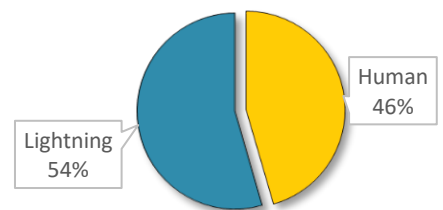

Fire statistics for this report were pulled from the FamWeb SIT Report. The statistics have not been reconciled with 1202s, INFORM, or other final fire reporting systems. Great Basin reported 2,966 fires for 950,117 acres, with 2,159 of those starts were human caused while 807 were natural ignitions.

Year	Human Caused		Lightning Caused		Totals	
	Fires	Acres	Fires	Acres	Fires	Acres

Summary of Fire Activity by Dispatch Center

Large Fire Activity Review

Per the National Mobilization Guide, a large fire is a wildland fire managed for complete perimeter control (Full Suppression), that is 100 acres or larger in timber fuel types, and 300 acres or larger in grass or brush fuel types. There are other incidents that require ICS-209s, but the chart below includes only fires that meet the 100+/300+ criteria and sorted by state and start date of the incident.

Arizona Large Fire Incidents

Unit ID	Name	Start Date	Cause (H/L/U)	Fire Size
AZ-ASD	Basin	5/10/20	L	38,628

Large Fire Occurrence by Month

The first large fire of the year was the “Basin incident” on May 10th, in Mohave County, AZ. The Basin was a 38,628 acre lightning caused fire, located twenty-two miles southeast of Mesquite, NV.

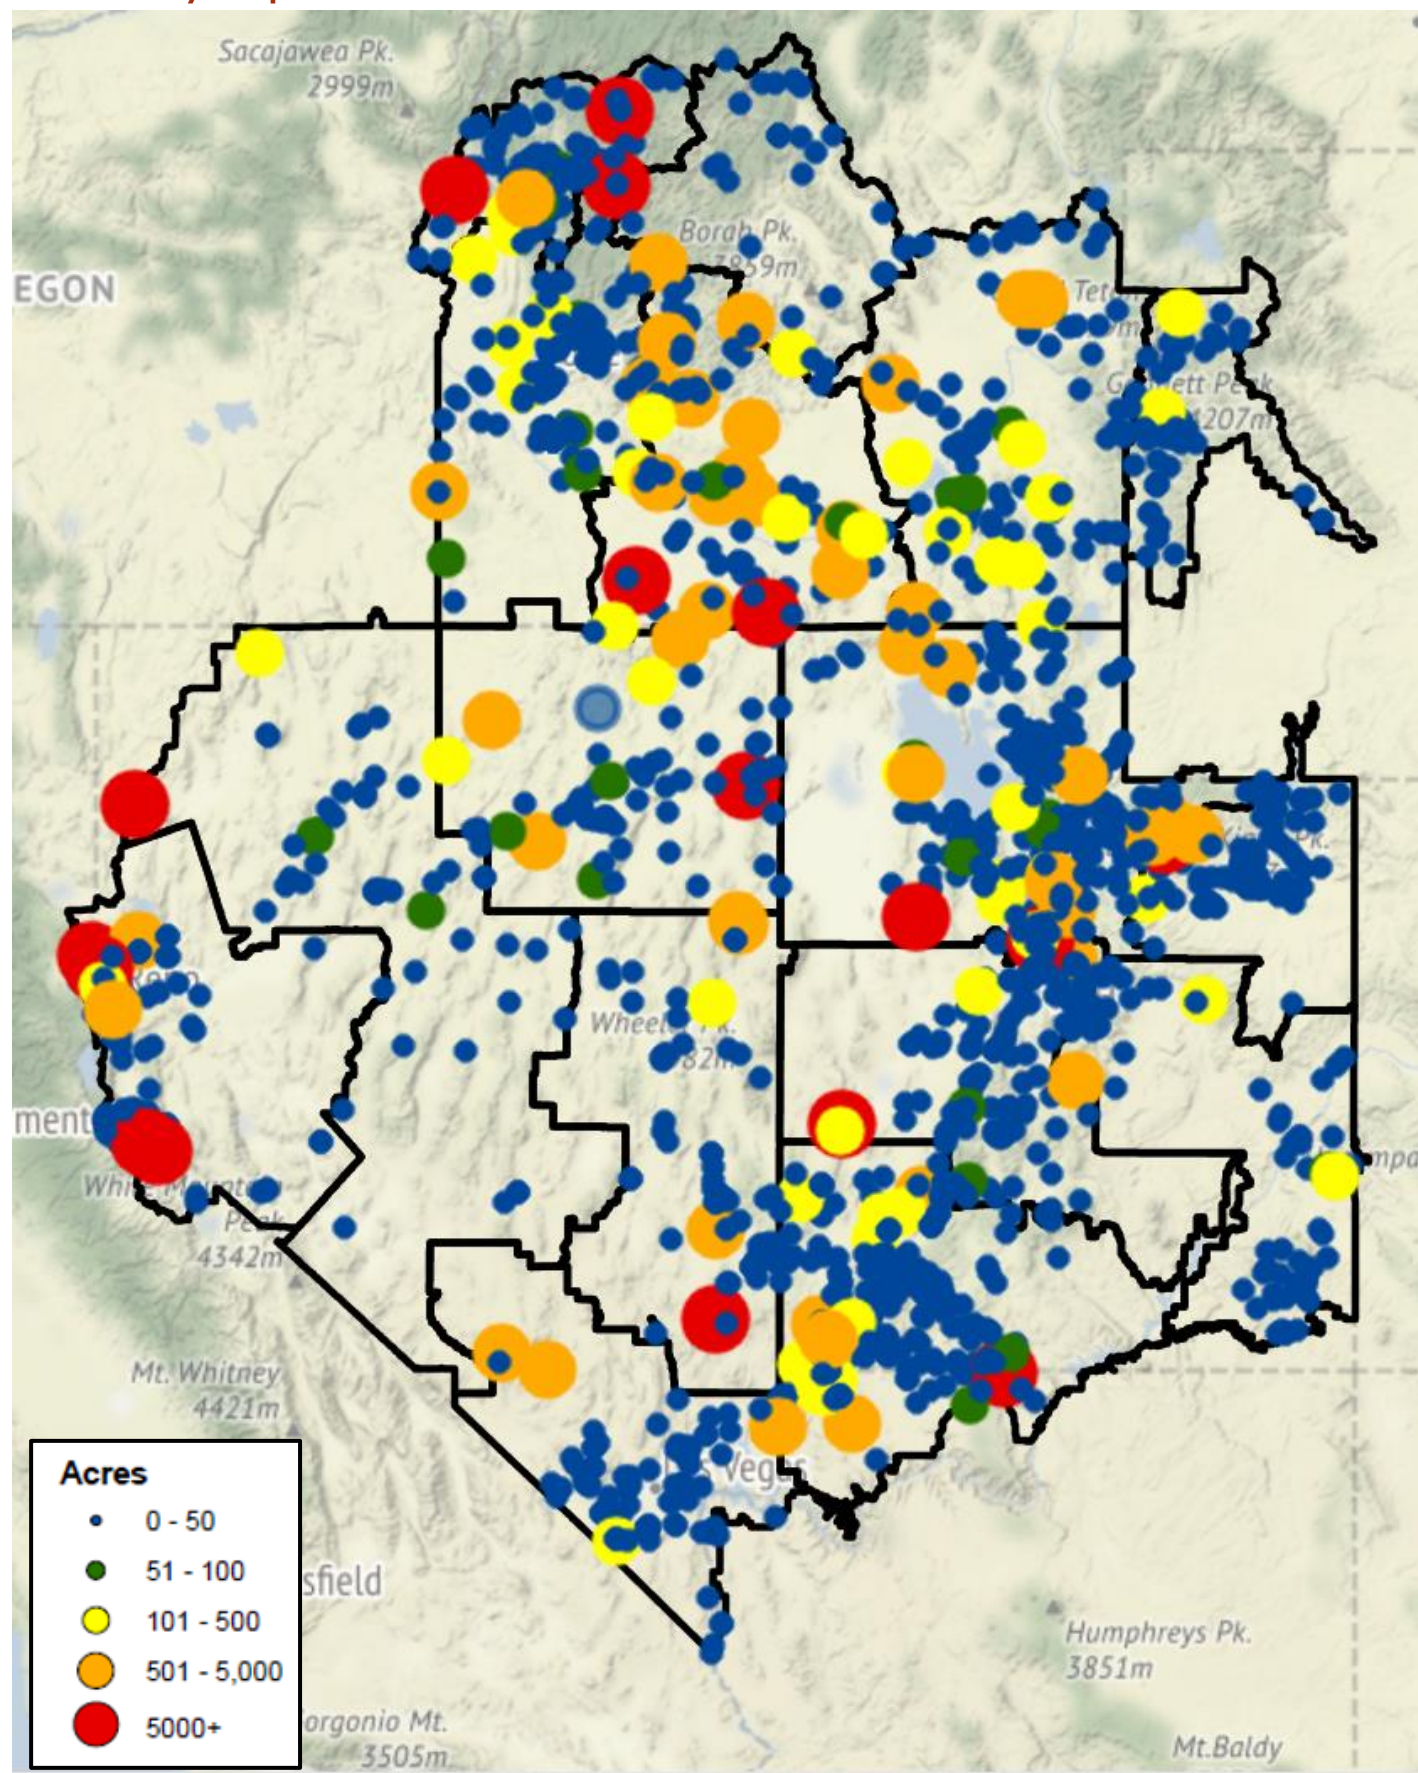

The largest fire of the year was the “Woodhead incident” on September 7th. The human caused US Forest Service, Payette National Forest fire, was located twenty miles West of Council, ID and burned 96,614 acres. It was contained/controlled on October 29th.

The graph below indicates large fire activity by month. The numbers align with a general pattern for large fire occurrence within the Great Basin. There were a few “late starts” to the typical large fire season during October and November, which persisted anywhere from a couple days to a few weeks.

Slink fire, NV-HTF, September 3, 2020

Fire Activity Map

Prescribed Fire Review

The following statistics display prescribed fires and acres burned by units as reported on the Daily Situation Report within the FAMWEB Program. Only agencies who reported prescribed fires and acres in the FAMWEB Situation Report Program are represented in the chart below.

* 3 prescribed fires for 61 acres in CA-NOD not included in table.

Osgood fire, NV-WID, July 22, 2020

Incident Management Teams (IMT)

Great Basin MAC Group

The Great Basin Multi-Agency Coordinating (MAC) Group wasn't activated during the 2020 fire season. However, a mini MAC version with aviation and intelligence support was virtually activated from June 29th to October 12th for total of 106 days.

Area Command & National Incident Management Organization – NIMO

Great Basin did not host an Area Command Team or National Incident Management Organization (NIMO) during 2020. However, both teams were committed to out of area incidents in California, Area Command for 100 days and NIMO for 58 days.

Type 2 Incident Management Teams

- Great Basin Type 2 IMTs were committed within the Great Basin for total of 200 days on 20 separate incidents. One IMT was mobilized out of GACC for 16 days
 - The initial mobilization for the geographic area was Bollier's Team (on June 29th) to the Canal fire in Utah. This was approximately three weeks earlier than the initial mobilization in 2019. The final mobilization for the season was Hick's Team, to the Badger fire, on September 17th.
 - Additionally, two out of area Type 2 IMTs were mobilized to two incidents within the Great Basin, late in the season in October and November, for total of 27 days.

Resource Order Summary

During 2020, the dispatch community within the Great Basin managed 84,584 requests. Of those 84,584 requests, 65,580 were filled, which equates to 78% fill rate. The total requests represent a 46% increase in requests compared to the 2019 season.

The data for the following charts have been pulled from IROC which was implemented in March 2020. There may be inaccuracies due to implementation of IROC with missing rostering and configuration data for that year.
